## DETAILED ACTION

### *Election/Restrictions*

This application contains claims directed to the following patentably distinct species:

Species I – Fig. 1-3, 4-6, 11, and 12

Species II – 7

Species III – 8 and 9

Species IV – 10

The species are independent or distinct because Species I shows the main components of a roof assembly embodying the invention. These components include a window, a main frame, and a flashing.

Species II shows a modification of the main frame component shown in figure 2. This main frame component provides electrical operation of the window component using a chain operator for example.

Species III shows another embodiment of the flashing component of Species I. The second embodiment of the flashing is constructed of L-shaped brackets, which connect to the main frame of the window as well as a flexible skirt, which extends from the brackets.

Species IV shows the third embodiment of the flashing component, which includes triangular shaped foldable flashing members. These triangular members increase in width from the top to the bottom.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.  
MPEP § 809.02(a).
